

DNA SAMPLE SUBMISSION FORM

Use this form when REGISTERING an animal OR when requesting PROOF OF PARENTAGE.

INSTRUCTIONS

1. Wash and dry your hands.
2. Lift the animal's tail gently, then brush/comb the skin on the underside of tail to remove dirt, manure and loose hairs from the sampling area.
3. Pull (do not cut) 30-50 hair strands by collecting 3-5 hairs at a time. Grasp the hairs close to skin and pull down sharply.
4. Examine the ends of the hair strands for the presence of root bulbs. Do not touch the roots.
5. Keep the hairs aligned, with the bulbs in the same direction. After you have collected 30-50 hairs, tape the bunch below. Do not put tape over the roots.
